

How to make warehouse outgoing movements?

help2.fractal.com/hc/en-us/articles/25152506833293-How-to-make-warehouse-outgoing-movements

To perform outbound movements, you should access the corresponding module in the warehouse, click on 'Outbound', and then on the add symbol located at the bottom right of the screen to initiate the movement

The screenshot displays the 'Warehouse Alphaville' interface. On the left, a sidebar contains navigation options: General, Stock, Purchase orders, Material requisitions, Entries, Outgoings (highlighted with a red box), and Movement History. The main area shows a table of outgoing movements with columns for Id, Type of Movement, State, Delivery Date, Movement Date, and Document. A blue '+' button is located at the bottom right of the table, also highlighted with a red box.

Note: It's important to mention that there are different concepts for outbound movements in the system, and these types of outbound movements are as follows:

- **Work Order:** Corresponds to outbound movements referenced to material requisitions associated with work orders.
- **General:** Corresponds to outbound movements made in a general manner within the warehouse.
- **Return to Supplier:** Corresponds to outbound movements made for the purpose of returning goods to the supplier from whom they were purchased.
- **Warehouse Transfer:** Type of movement that allows transfer between warehouses existing in the system.
- **Allocation:** Type of movement in which tools can be allocated to a human resource.

After loading the items and clicking save, the outbound movement will be processed and reflected in the warehouse's inventory.
