

Fracttal BI

help.fracttal.com/hc/en-us/articles/25053221585549-Fracttal-BI

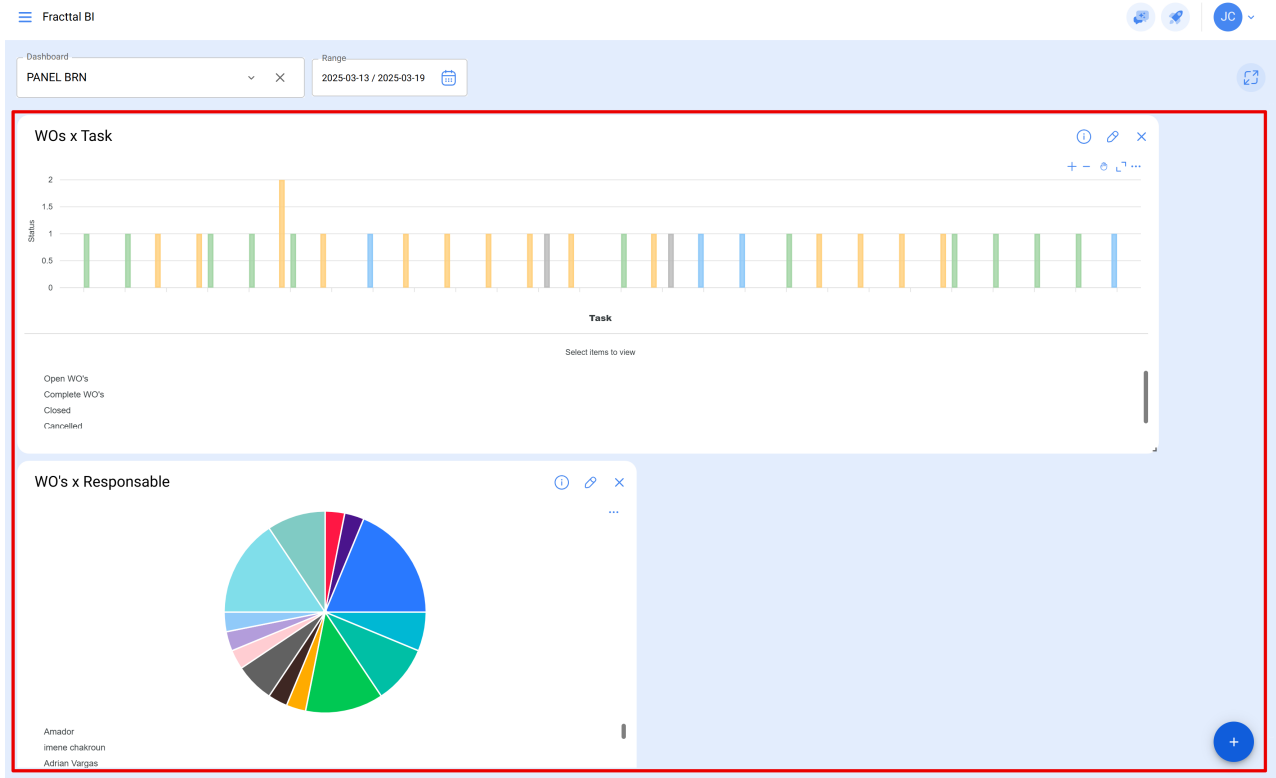

In Fracttal BI, you have the ability to create customized dashboards to visually analyze and interpret information coming from other modules in the platform. These dashboards consist of various types of widgets (graphical tools) that allow you to represent data visually, improving the interpretation and analysis of the information.

Steps to access and create a customized dashboard in Fracttal BI:

1. Access Fracttal BI:

In the platform's main menu, select the option "Business Intelligence." This section will take you to the Fracttal BI module, where you can begin working with customized dashboards.

Note: The Fractal BI module is included in all Fractal commercial plans and will have by default 2 dashboards, in which you can add up to 6 graphs or widgets in each one. In case you need to add more dashboards or widgets, you will have to contract it as an Add-On or additional functionality.
