

How to generate a purchase order via the warehouse?

help.fracttal.com/hc/en-us/articles/25151365399565-How-to-generate-a-purchase-order-via-the-warehouse

A purchase order is a document issued by the buyer to request an item from a supplier. It's important to note that, in order to generate a purchase order in the system, the supplier must be registered beforehand in the third parties module, and the item to be added to the purchase order must be linked to the inventory of the respective warehouse.

To generate a purchase order, first go to the purchase orders tab and then click on the add symbol located at the bottom right of the platform.

The screenshot shows the 'Fractal Almacén' interface. On the left, there is a sidebar with navigation options: General, Stock, Purchase orders (highlighted with a red box), Material requisitions, Entries, Outgoings, and Movement History. At the top, there is a toggle switch for 'Enabled' which is turned on. The main area displays a table of purchase orders with columns: Purchase Order ID, Supplier, State, Ref / Purchase Requ..., and Term. The table contains three rows of data. At the bottom right of the table area, there is a blue circular button with a white plus sign, also highlighted with a red box. The text 'Showing 3 of 3' is visible at the bottom left of the table area.

	Purchase Order ID	Supplier	State	Ref / Purchase Requ...	Term
<input type="checkbox"/>	OC422	AIR JBM COMPRESORES	Delivered	1234	PAG
<input type="checkbox"/>	OC322	Supply Power	Not delivered	OC222	PAG
<input type="checkbox"/>	OC122	MADRILEÑA DE AIRE COMP...	Delivered	REF-001	PAG

After clicking, a new window will open where you must establish all the parameters related to the purchase order you wish to generate:

- **Supplier:** Catalog listing all third parties who are suppliers of goods and can be selected when generating the purchase order.
- **Cost Center:** Catalog where you can choose which cost center will be associated with the purchase of these materials.
- **Delivery Date:** Date by which the items are scheduled for delivery.

- **Reference / Material Request:** Document number referencing the purchase order (could be the reference from a material request, if that functionality is contracted). Additionally, the reference can be useful when generating the material entry into the warehouse.
- **Priority:** Priority level of the purchase order.
- **Terms:** Catalog of purchase terms.
- **Currency:** Currency type in which the material purchase is made. This list depends on the catalog created previously in the Financial Configuration module.
- **Exchange Rate:** Conversion rate between the main currency used in the system and other currencies in which transactions can be made (conversion can be set in the Financial Configuration module).
- **Note:** Notes associated with the generated purchase order.
