

How to edit an existing rule?

 help.fractal.com/hc/en-us/articles/25021655985677-How-to-edit-an-existing-rule

The **Automator** rules allow you to define the conditions that must be met and the actions that the system will automatically execute when these conditions are fulfilled. If an already created rule requires adjustments, you can edit its configuration at any time without needing to create a new one.

To edit an Automator rule, click on the rule you want to modify to access the options menu.

When you click edit, the system will display the window with the general, conditions, and actions tabs so you can make the desired edits.

2/4

If you want to **enable** or **disable** an existing rule, use the **Enabled** toggle available on each rule. While a rule remains disabled, the Automator will stop evaluating it and, therefore, will not execute any of the configured actions, such as sending notifications or other associated automations.
