

Work Request Analysis - Filter bar

help.fractal.com/hc/en-us/articles/25195519208845-Work-Request-Analysis-Filter-bar

Filter bar

At the top of the window you will find a bar at any time which will allow you to perform search filters for the following options:

Filter Location

Considering that in Fractal assets can be aggregated and structured in an organized tree view, the "Location filter allows searching for assets contained below the asset to which the filter is applied.

For example: If in our database we have a main location called Parent Company, which contains as sub-locations Plant 1 and Raw Material Area, which in turn contains conveyor belts as equipment (see image). If we apply the filter on the Parent Company, the system will show us the information associated with the assets contained in that location (Plant 1 - Raw Material Area and Conveyor Belts).
