

What is Cloud Disk and how to access it?

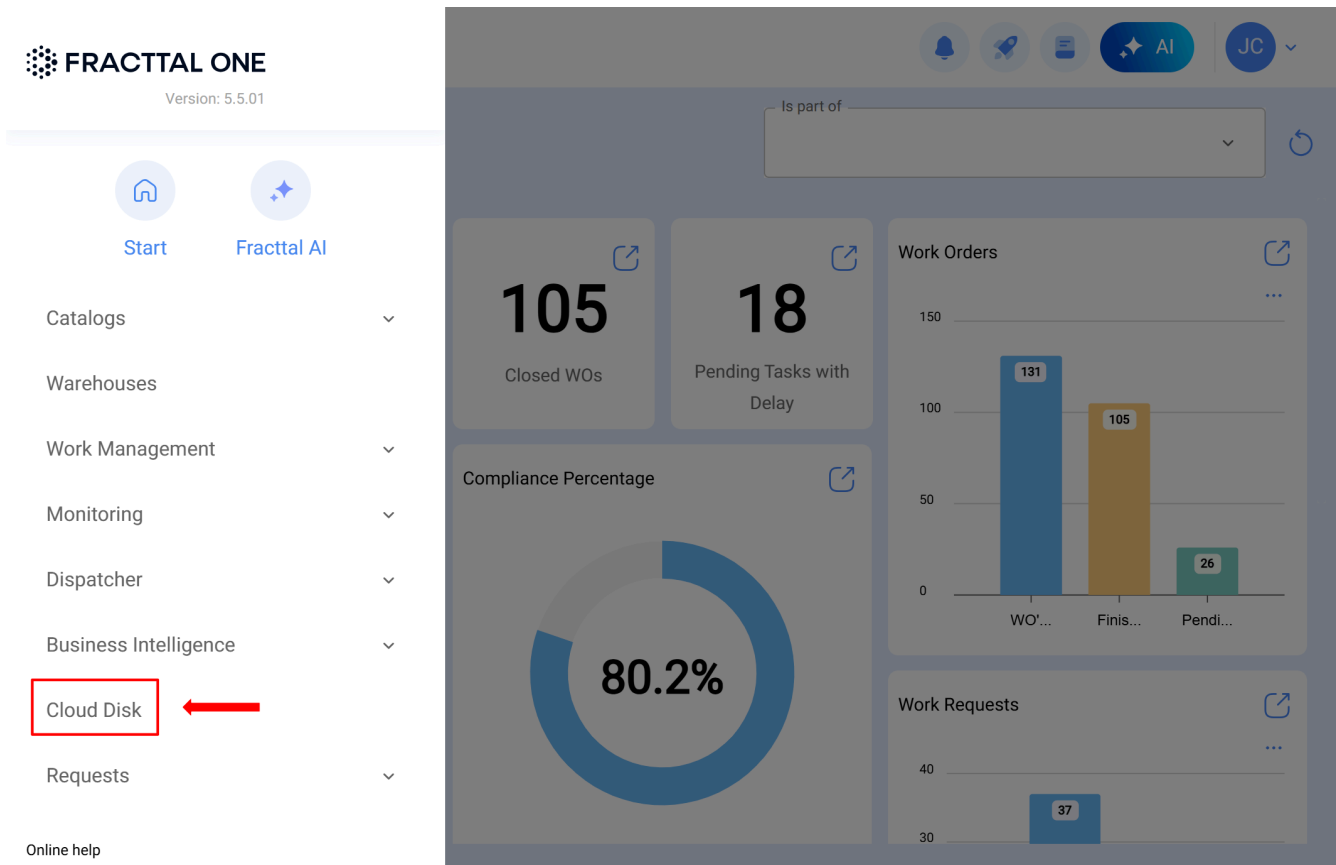

help.fractal.com/hc/en-us/articles/24944665886861-What-is-Cloud-Disk-and-how-to-access-it

The Cloud Disk is a module where you can create folders and upload digital files so that they are always available when accessing your database and can be used as attachments in your task plans.

How to enter the Cloud Disk module?

To access the Cloud Disk, you only have to drop down the menu that you will find in the upper left part of the main bar of the platform and click on "Cloud Disk".

When you click on it, a new window will open where you will find all the folders and files stored on the cloud disk.
