

Fracttal BI Advanced

help.fracttal.com/hc/en-us/articles/25156763293069-Fracttal-BI-Advanced

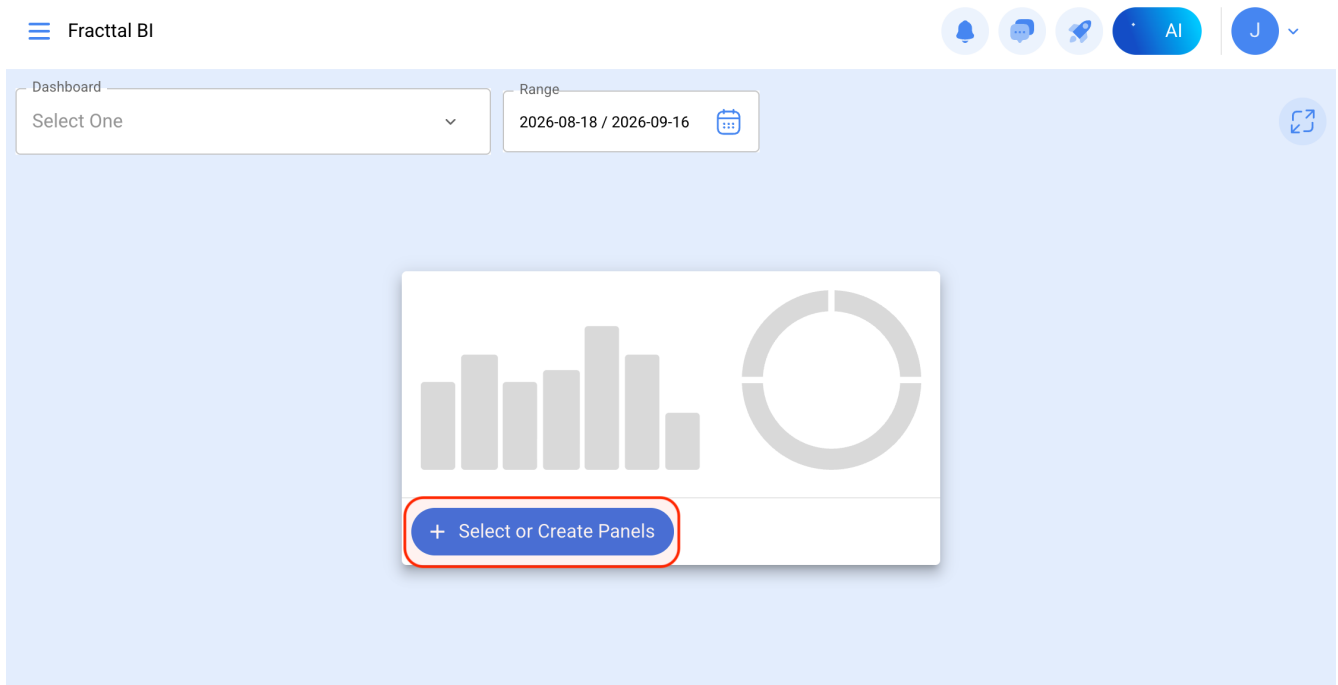

The Fracttal Advanced BI add-on is a powerful tool designed to facilitate the graphical visualization of maintenance activity. Its primary goal is to provide better interpretation and analysis of the information recorded on the platform, allowing users to make more informed and strategic decisions.

In its standard version, Fracttal BI allows the creation of up to 6 widgets and 4 customized dashboards. These capabilities enable users to visualize data from various sources, such as tasks, meters, task plans, work requests, and work orders. Each graph can be adjusted to highlight the most relevant information for specific maintenance needs.

It is possible to select previously created visualization panels or create a new one from scratch.

Benefits of Fractal BI Advanced

The Advanced version of Fractal BI significantly expands these capabilities. With Fractal BI Advanced, users can:

- **Create up to 15 customized widgets:** Increases the number of available widgets to visualize various types of data in a more detailed and specific way.
- **Unlimited dashboards:** There are no restrictions on the number of dashboards that can be created, allowing greater flexibility and customization in organizing and presenting information.
