Showing 50 of 127

User Type: Inhouse Personnel Enabled

Name: Aaraul ✕ ▼ Email: santiago@fractal.com

Profile: Read-only ▼ Group Permissions: Admin lectura ✕ ▼

Configuring the main module for login

Allow user editing Viewing main dashboard Module: Dashboard ▼

Show only active Assets

Location: // ▼

Other Options

Authentication only by Single Sign-On

Receive email notifications

Two-step authentication without setting up

Options will be displayed according to the locations previously created in the assets module, where you can localize the account in question.

The image shows a user account editing interface on the left and a list of assets on the right. The user account page is titled "Edit User account" and includes fields for User Type (Inhouse Personnel), Name (Aaraul), Email (santiago@fractal.com), Profile (Read-only), and Group Permissions (Admin lectura). It also has a section for "Configuring the main module for login" with options for "Allow user editing" (unchecked) and "Viewing main dashboard" (checked), and a "Module" dropdown set to "Dashboard". Below that is a "Show only active Assets" section with a "Location" dropdown set to "//". The "Other Options" section includes checkboxes for "Authentication only by Single Sign-On" (unchecked), "Receive email notifications" (checked), and "Two-step authentication without setting up" (unchecked). The assets list on the right is titled "Search by Assets" and shows a list of location assets: METALMECANICA - GALCO Medellin, Bufalabella, Lafayette, Aguas de Bogota, and Hangar Bogotá. Each asset entry includes its Type (Locations), Code, Priority, and Location. The list is paginated, showing 50 of 22083 items.

Click on the save button at the upper left of the window to register the changes.

Note: Once the location assets have been created in the assets module, user accounts can be localized to those locations. Keep in mind that localized accounts have certain viewing restrictions because since they're localized, they can only view data in hierarchical levels below where they are localized.
