

Simultaneous Work Restriction on Multiple Tasks in Work Orders – Help Center

help.fracttal.com/hc/en-us/articles/43314794432653-Simultaneous-Work-Restriction-on-Multiple-Tasks-in-Work-Orders

The simultaneous work restriction is controlled by a configurable parameter that, when enabled, enforces specific validations for task start and manual time logging in Work Orders, ensuring there are no overlaps between tasks that should not be performed at the same time.

Access and management of this parameter are done through the following path in the system:

"Settings → Modules → Work Orders → “Restrict simultaneous work on multiple tasks in WOs”.

Type
Work Orders

Options and permissions

Work order ID

Description

- Allow to qualify the WO even though it is under review
- Filter human resources according to the selected profile (Within a task)
- Allow updating triggers with active WOs
- Establish mandatory completion of the failure catalog
- Allow automatic WO generation to be triggered by the scheduled date
- Allow mandatory signature in Compliance and Security forms
- Allow advanced cancellation options for work orders
- Analyze compliance without monthly restriction
- Enable task end or stop reason
- Automatically generate link to share all WO
- Restrict entry of simultaneous time on multiple tasks.

Options and permissions		Work order ID
Description		
<input checked="" type="checkbox"/>	Allow automatic WO generation to be triggered by the scheduled date	
<input checked="" type="checkbox"/>	Allow mandatory signature in Compliance and Security forms	
<input checked="" type="checkbox"/>	Allow advanced cancellation options for work orders	
<input type="checkbox"/>	Analyze compliance without monthly restriction	
<input type="checkbox"/>	Enable task end or stop reason	
<input checked="" type="checkbox"/>	Automatically generate link to share all WO	
<input checked="" type="checkbox"/>	Restrict entry of simultaneous time on multiple tasks.	

When the "Restrict simultaneous work on multiple tasks in WOs" parameter is active, the system applies the following validations:

If a responsible person already has a task in progress in a Work Order, the system will prevent starting a new task for the same resource.

✘ You cannot start this task. Another WO is currently in progress.

Log

Note: Although this function is active, if a task is put on **pause** before starting another, it is possible to log consecutive times on different tasks, as the system only prevents time overlap when both tasks are in normal execution.
