

What to do if I accidentally delete a task and need to recover it?

 help.fractal.com/hc/en-us/articles/41075785425165-What-to-do-if-I-accidentally-delete-a-task-and-need-to-recover-it

When a pending task linked to a Work Request is deleted, it can be recovered by scheduling it again from the Requests module. To review the complete procedure, see the article on [management and conversion of a work request into a WO](#).

It is not possible to recover tasks that are not associated with a request, such as unscheduled tasks or tasks generated from work plans, as their deletion is permanent. In these cases, it will be necessary to create a new task manually.

To avoid these types of situations, it is recommended to use the event-triggered task functionality, which allows configuring the automatic generation of corrective tasks. For more details, see the article on [task triggers](#).
