

# Functional -Tree map view

[help2.fractal.com/hc/en-us/articles/25190161641485-Functional-Tree-map-view](https://help2.fractal.com/hc/en-us/articles/25190161641485-Functional-Tree-map-view)

The Facilities and Equipment asset type views has a “Treemap” function which allows you to visualize the assets as a list view arranged in a hierarchical structure, starting from the highest level to the lowest depending on how they are established within the platform.

The screenshot shows the Fractal platform interface for the 'Locations' view. The 'Treemap' view is selected, and a table of assets is displayed. The table has columns for Enabled, Out of Service, Description, Name, and Address. Two rows are visible: 'HOME { HM-01 } PUERTO RICO' and 'ROAD { ROAD-01 } PUERTO RICO'. The 'Treemap' button and the '+' icons in the table are highlighted with red boxes.

Enabled	Out of Service	Description	Name	Address
Yes	No	HOME { HM-01 } PUERTO RICO	HOME	
Yes	No	ROAD { ROAD-01 } PUERTO RICO	ROAD	

**Note:** This view only allows viewing the type of asset according to the tab in which we are. That is, if we are in the “Facilities” view, we can only view assets of this type.
