Unlimited Request User

The Unlimited Request User add-on allows your account to add an unlimited number of profiles for making requests (reporting only), making it easier for various members of the organization to report anomalies in the equipment. This extends the coverage of potential reports and allows you to stay ahead of requests in the different areas where your assets are located

Benefits

Extended Coverage

With an unlimited number of users, your organization can rely on a broad reporting network, enabling quicker identification of issues, especially in large environments or those with multiple locations.

Comprehensive Visualization

Collecting reports from different users provides a complete view of the asset status, facilitating the identification of failure patterns or recurring issues.

Continuous Monitoring

The active participation of more users ensures constant monitoring of the equipment, allowing timely response to incidents and preventing prolonged downtimes.

Ease of Use

The system is intuitive, allowing all users, regardless of their technical level or system knowledge, to report problems easily. This fosters active participation and effective collaboration among organization members.

Are you ready to improve equipment monitoring with the participation of your entire organization?
