

Fracttal BI - Default Charts

help.fracttal.com/hc/en-us/articles/25052439760653-Fracttal-BI-Default-Charts

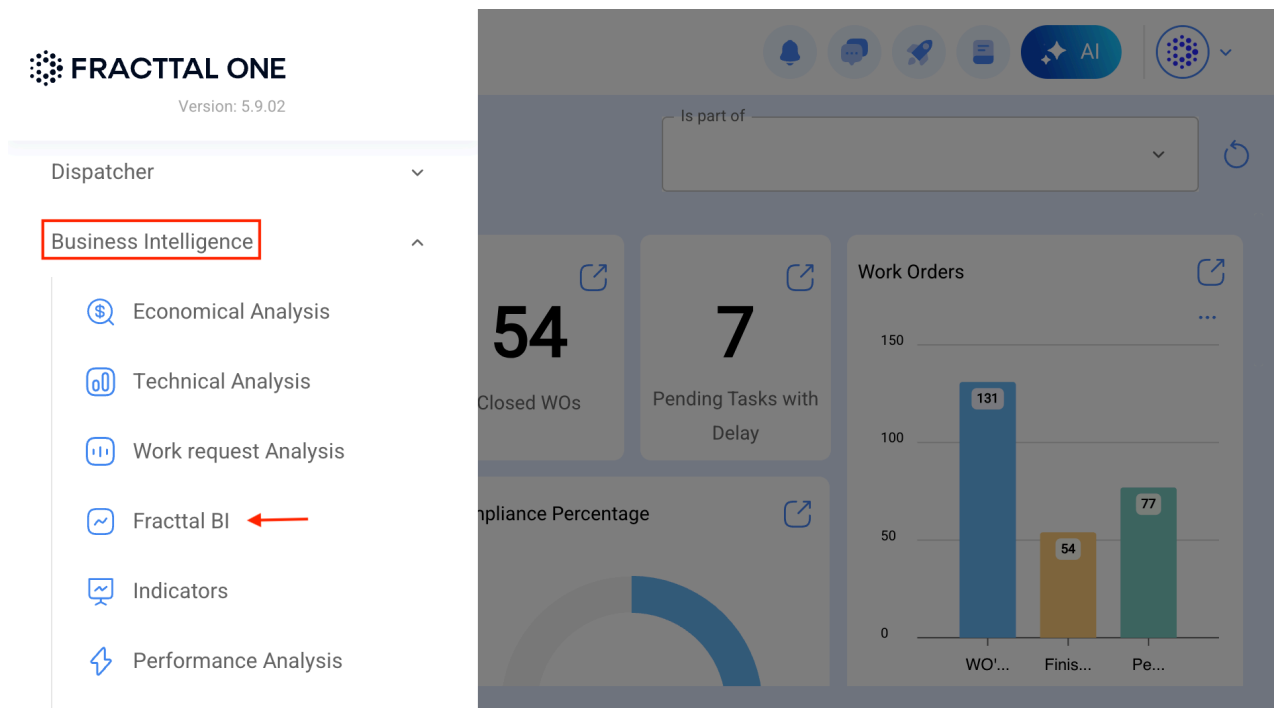

Fracttal BI is a module that allows you to create customized reports according to the user's needs. It offers charts combining various variables from Fracttal One, facilitating a compact analysis of traceability to understand the management status and support decision-making for continuous improvement.

To create reports, fields must be completed to facilitate a clear presentation of the data. Now, with the new default charts feature, the most common and relevant charts are offered.

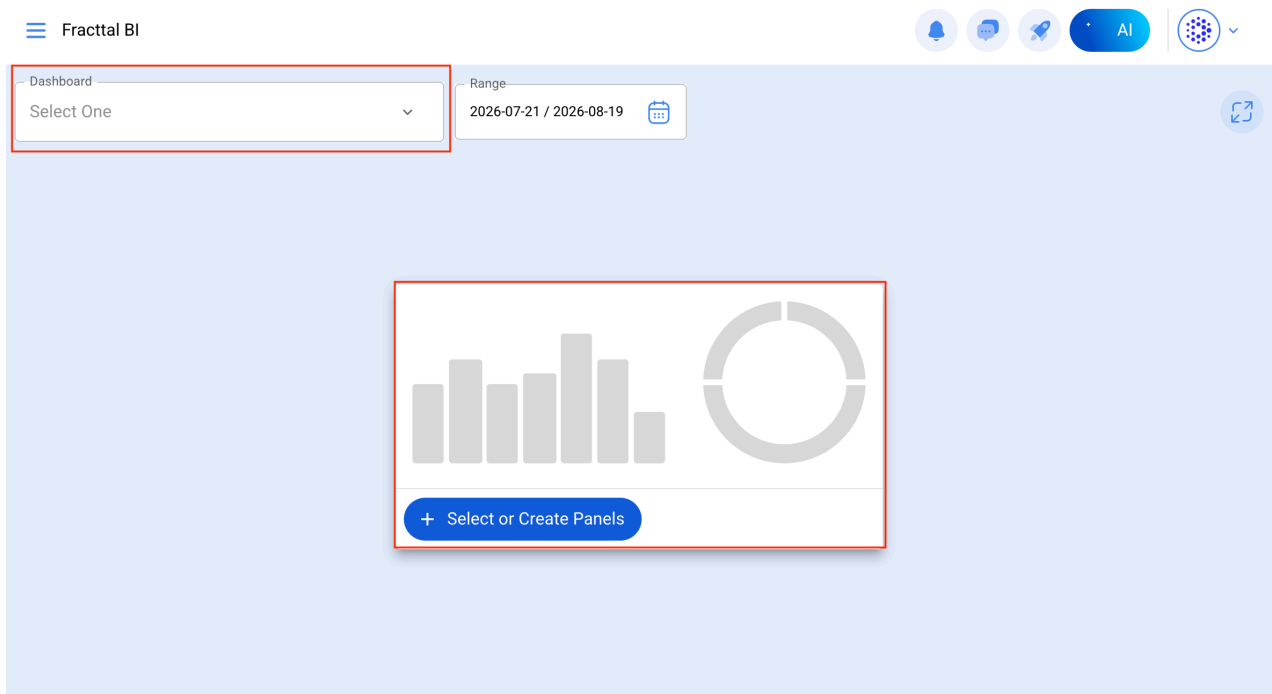

Procedure to generate default charts

Procedure to generate default charts

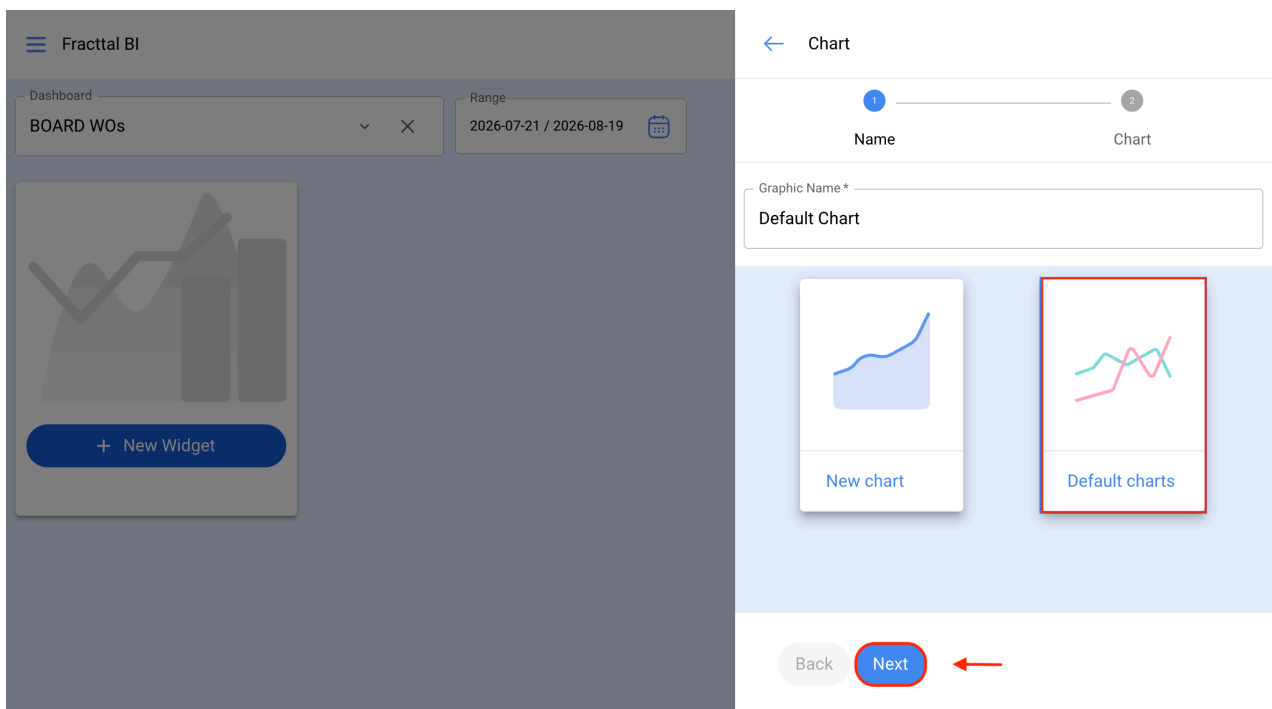

1. Enter the **Fracttal BI** submodule.

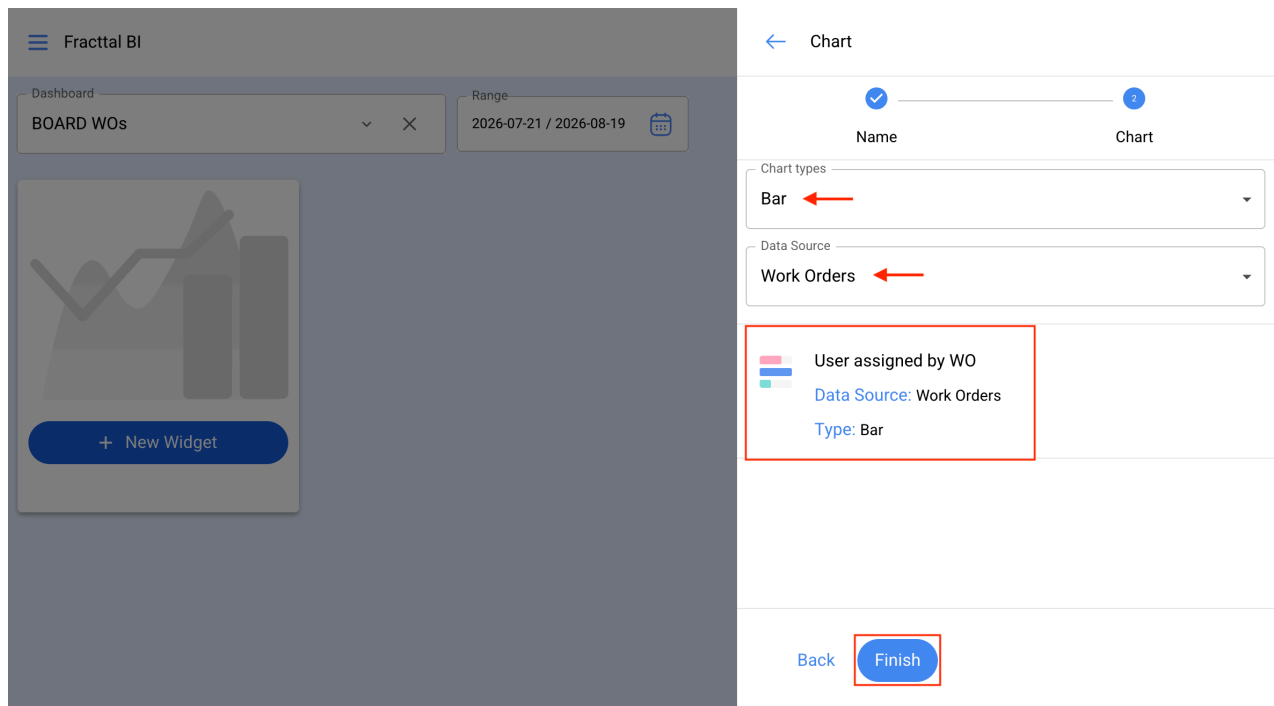

2. Enter the dashboard where you want to create the new chart and select **New widget** or click the **(+)** icon.

3. Assign a name to the chart, select the **Default Charts** option, and click **Next**.

4. Select the **Chart Type** and the **Data Source**. By doing so, only the chart options compatible with the selected configuration will be shown.

You can also directly select the chart type from the available options. Each option includes a visual description of the chart and the compatible data source.

5. Click **Finish** to create the chart.
