

Asset health status

help2.fractal.com/hc/en-us/articles/25266646525709-Asset-health-status

With the new asset health status functionality, you will be able to obtain a more straight forward visualization of your assets planned maintenance compliance (locations and equipment), allowing you to observe through a time series graph how the compliance with the plan that was developed for them has been.

You will have a better understanding of the availability of the assets, if the execution of the tasks has been fulfilled according to the stipulated dates in the plan and where the inflection points have occurred, so you can make decisions in favor of the continuous improvement of preventive maintenance activities.

Process to observe the health status

1. Open the Catalogs > Assets module.

2. Search for the asset (Location or Equipment).

Assets
Equipment

motor norton

Planned Maintenance Plan de mantenimiento motor electrico

Asset Reliability: graph of the task compliance behavior of the task plan in general, to which that asset is linked.

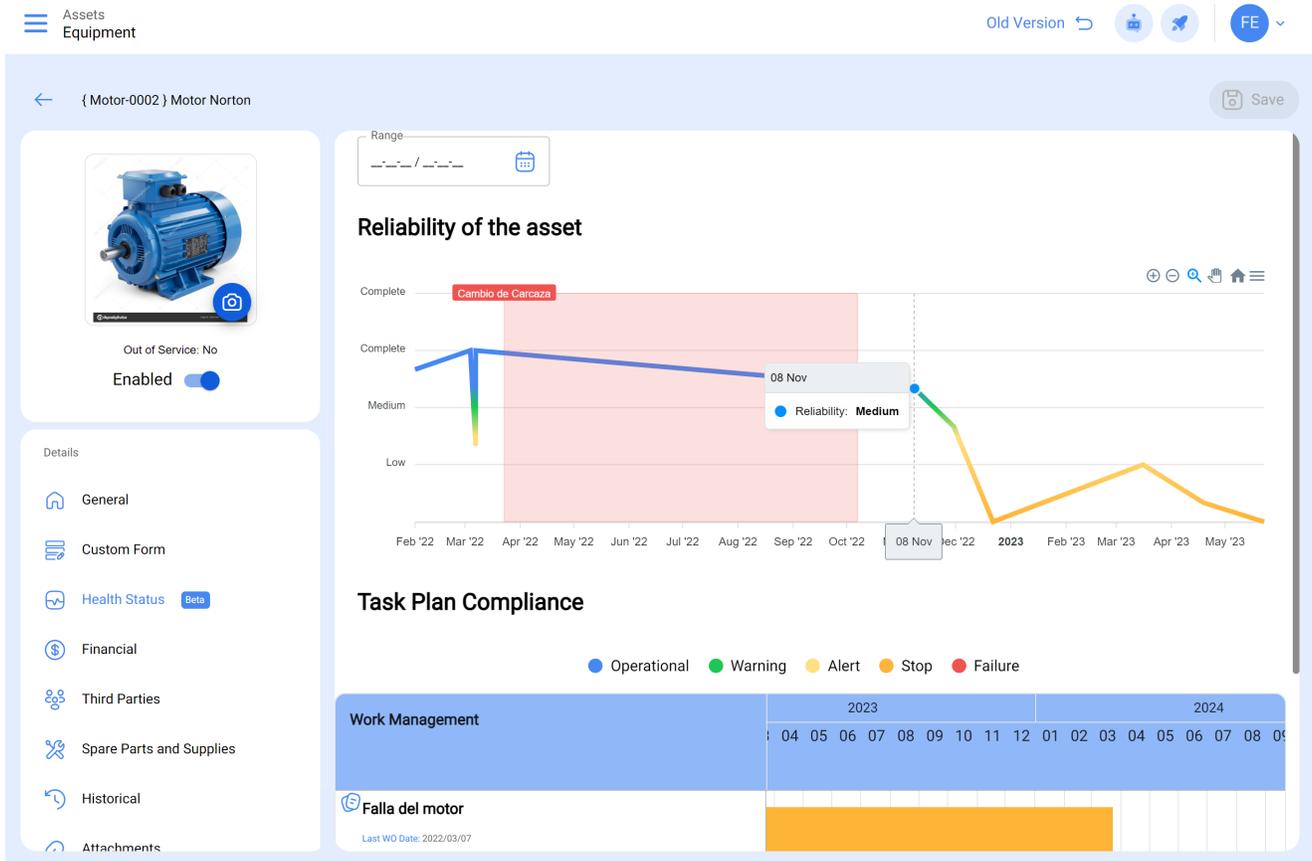

Task Plan Compliance: it shows the detail of each of the tasks that could have affected this reliability. As seen in the previous image, there are 4 types of statuses differentiated by color, which are explained below:

- **Operational (Blue):** it is when the tasks are executed respecting the calculated dates with a tolerance of 10% according to the periodicity of each task.
- **Warning (Green):** This is when the 10% tolerance of the Operational status is exceeded and also has a tolerance of 10% according to the periodicity of each task.
- **Alert (Yellow):** This is when the 10% tolerance of the Caution state is exceeded and also has a tolerance of 10% according to the periodicity of each task.
- **Stop (Orange):** This is when 10% of the Alert state tolerance is exceeded and will remain until the task is completed.
- **Failure (Red):** This is when the equipment has a failure.

Example: If there is a task with activator every month and its calculated date is for 01/01/2000, it will have the operational status whose fulfillment is before 03/01/2000. In the case this date is exceeded, the status will be Caution. If it is not finished until 06/01/2000, then it will pass to the Alert status. If it is not finished until 09/01/2000, then it will pass to the last status (Stop) and it will maintain this status until the date this status is resolved.

Note: At the moment of viewing the health status for the location type assets, the following must be considered:

1) You can have two analyses; one that corresponds to the general report of all the assets that have as children this location and the graphs of the location itself.

2) In order to be able to observe the Task Fulfillment graph, you must select some point of the graph with the cursor, so that you can have the detail in the selected time.

Task Plan Compliance

● Operational ● Warning ● Alert ● Stop ● Failure

Work Management	2023												2024					
	04	05	06	07	08	09	10	11	12	01	02	03	04	05	06	07	08	09
Falla del motor																		
Last WO Date: 2022/03/07																		

Note:

For this first iteration, a balanced percentage of 10% tolerance has been defined in the periodicity of task compliance.

It is expected for the second iteration of the functionality that the user can set the percentage according to the criticality of the compliance according to the task plan.
