

# How to configure your resources by iteration?

[help2.fractal.com/hc/en-us/articles/24946422001933-How-to-configure-your-resources-by-iteration](https://help2.fractal.com/hc/en-us/articles/24946422001933-How-to-configure-your-resources-by-iteration)

Just as it is possible to establish subtasks by iterations, it is also feasible to define directly in a task list which resources will be used according to each iteration.

To add resources according to iterations, just add a resource to the task list in the normal way.

The screenshot displays the Fractal Work Management interface. The main view shows a task list for 'CAMIONETA (ACH)'. The task 'MAINTENANCE EVERY 250 KILOMETERS' is highlighted. The right sidebar shows the 'RESOURCES' tab selected, with a red box around the 'RESOURCES' icon. Below the task list, there is a table with the following data:

Description	Configured...	Priority	Estimated Duration	Task type	Group
MAINTENANCE EVERY 250 KILOMETERS	Yes	Medium	10mins	PREVENTIVE	

The right sidebar also shows details for the selected task: '{ A15 } TOTAL OIL 10w-60 / 1/4'. The details include: Qty: \$ 1/4 de Galón, Type: Inventory, Unit cost: \$ COP 0,00, and Total cost: \$ COP 0,00. At the bottom right of the interface, there is a blue circle with a white plus sign, which is highlighted with a red box.

Then, when selecting the added resource (it can be an inventory, human resource or service type), an editing bar will be enabled.

+

When you click on the resource, a new window will appear where you can define in which iterations the resource should be used.
