

# Account

[help.fractal.com/hc/en-us/articles/25054535584013-Account](https://help.fractal.com/hc/en-us/articles/25054535584013-Account)

Updated

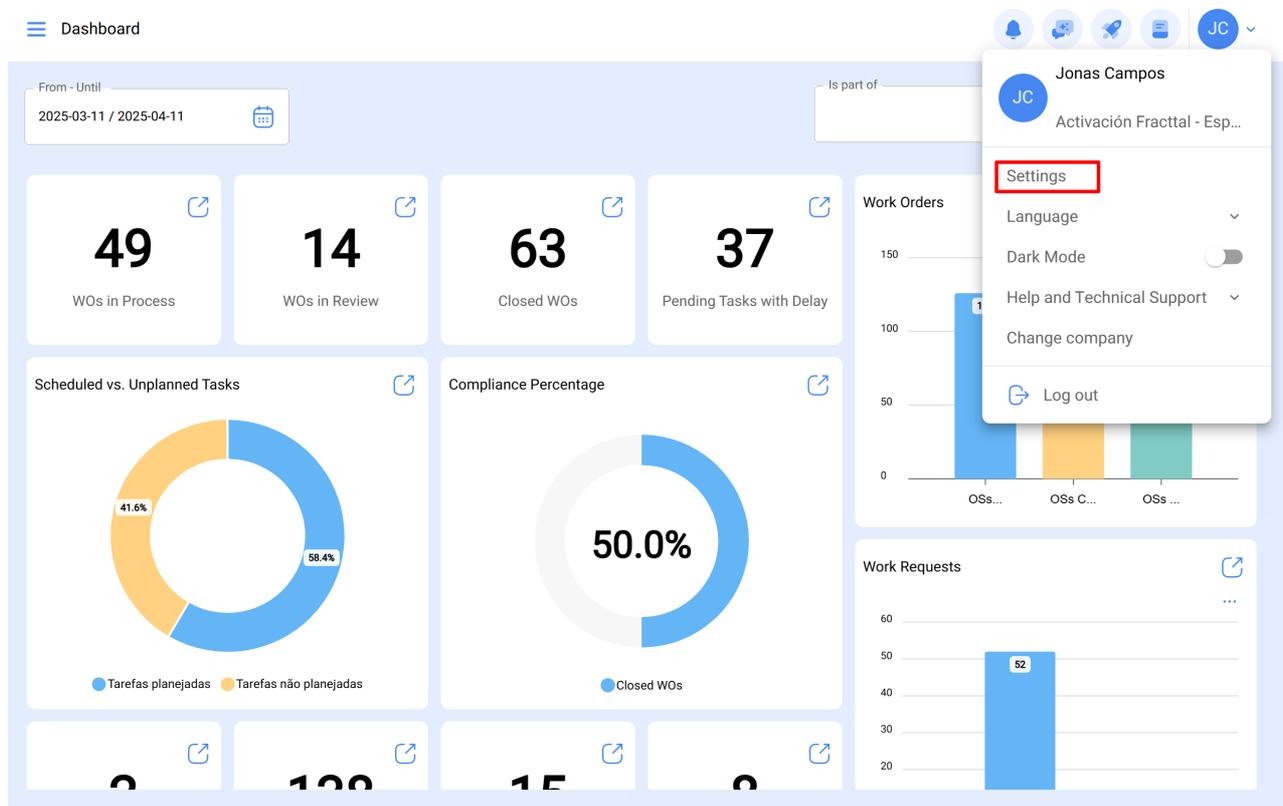

The "Account" submodule provides centralized information for managing and administrating resources within the platform environment. From this section, you can view the subscribed plan, available storage capacity, the total number of registered assets, and user account control. Additionally, it allows you to review the activated Add-Ons or additional features in the system.

**Plan and storage capacity:** Displays the active plan type and the total available storage space on the platform. It shows both the amount used and the maximum limit allowed, enabling efficient control of storage usage.

**Assets:** Indicates the number of assets created within the system. This field helps verify how many assets are registered against the limit established by the plan.

**User accounts:** Provides a summary of the total number of accounts created, including requester accounts, read-only accounts, and limited technician accounts. This information helps monitor and control access by profile.

**Add-Ons:** Allows identification of additional modules or extra functionalities that have been activated as part of the subscribed plan.
